

## **User Manual**

1. The User must input the following parameters:
  - Investment Deposit
  - Interest rate
  - Start date (To)
  - End date (From)
2. Tax rate and inflation rate depends on if there was an inflation or tax paid during that period.
3. The user has three output displays, to enable the user see the future Value (Earning) at the end of maturity date.
4. Depending on the input the display would show earnings with normal interest rate, with tax rate and with inflation.
5. The most important parameters as shown in NO. 1 of this manual are validated and if any is left blank, the user sees an error message.
6. The start date must be greater than the end date.
7. The start date can be backdated in case the user decides to check previous investments.
